

Positive SSL - Basic DV Multiple Sites

Provided by Comodo's brand Positive SSL, the Basic DV Multiple Sites certificate can secure several sites names and protect several of your showcase web sites.

Google is now ranking higher website available in HTTPS.

It has then become a necessity for SEO to secure every web sites even the ones that do not collect data. That's what Positive SSL certificates propose.

trust booster

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to it's own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.
